

# The sky's the limit with Twaron®

Teijin Aramid's innovative aramid materials are revolutionizing the air cargo industry by radically improving the performance of Unit Load Devices (ULDs). In particular, aramid materials are used to produce MACRO-Lite panels to make ULDs lighter, stronger, and flame-retardant. As such, airlines can cut fuel costs and limit their environmental impact, while also transporting lithium batteries safely.

*Higher impact resistance*

*Increased fire and heat resistance*

*Lower weight and environmental impact*

## MACRO-Lite ULDs with Twaron®

- Have higher impact resistance
- Have lower weight and environmental impact
- Have increased fire and heat resistance
- Have longer product lifetimes
- Are compliant with higher regulatory standards
