

This is our past and our future. Sustainability

At Teijin Aramid, we are proud that – guided by our ambition to shape a better future for generations to come – we have a strong track record on sustainability. For example, we pioneered our ballistic vest recycling programs as far back as 1998. Over the subsequent two decades, we have put in place a wide range of sustainability initiatives. These include creating our Customer Benefit Model (2015), and beginning sustainable pilots with companies like BioBTX.

“Our ultimate goal is a fully sustainable circular aramid chain with a finite use of resources on the basis of 100% renewable energy.”

Gert Frederiks, CEO of Teijin Aramid
